

fewer phone calls. more face time.

To coordinate care across communities and health systems, providers need the ability to seamlessly exchange patient records with care partners – no matter the EHR.

athenaClinicals' patient record sharing functionality helps you access the patient records you need to achieve the best outcomes for your patients. Patient record sharing automatically searches our comprehensive network of care sites, CommonWell, and Carequality, locates your patient's records, and surfaces them directly in your clinical workflow. So you can get the data you need, stay off the phone, and stay focused on your patients.

Join the most universally-connected network

With over 160,000 providers on our network and connections to thousands of care sites via CommonWell and Carequality, our network is the highest rated for exchanging clinical records with different EHRs, compared with other EHR vendors.*

Harnessing the power of our network, you have access to the records you need, regardless of the EHR in use.

Reduce your IT burden

We take IT work off your plate, building and maintaining connections to CommonWell and Carequality so you don't have to.

With our cloud-based platform, we can quickly activate your organization on CommonWell and Carequality, giving you access to a comprehensive national network.

Access patient data when you need it

We surface patient records in your clinical workflow in athenaNet, so you don't have to log into a separate system or jump to another tab.

We auto-label patient documents with key information such as provider name and document type, making it easy for you to quickly identify records you want to review.

Highest rated for sharing with different EHRs in 2016 and 2017 KLAS Interoperability Reports'

96%

participation in CommonWell and Carequality makes athenaClinicals clients the most connected among EHR users**

connect across your community – and the country

The athenahealth network connects you to payers, providers, and other healthcare entities across the country

CommonWell and Carequality extend your connectivity even further

8,000

provider sites connected to CommonWell²

600,000

providers connected to Carequality³

Easier patient record sharing helps organizations of all sizes

“In the daily operations of a practice, record transfer sits on the bottom of the pile, so having a tool that can pull records directly into the patient chart regardless of where the patient went for care means we can work more efficiently.”

— Dr. Jeffrey Hawtof, VP of Medical Operations and Informatics, Beebe Healthcare

“There is peace of mind for the patient knowing no matter where they go or who they see, the physician will have access to their CCD [continuity of care document] created by athenahealth.”

— Dr. Joseph DiPoala, Jr., Co-founder, Ridgeview Internal Medicine
